LĀUTA

Limbažu novada pašvaldības aģentūra

Municipal agency is responsible for attracting tourists to the Limbaži district.

The public water management department is responsible for water bodies managed by the district - both above and below water (swimming, fishing and other activities.).

... and whole seashore in our district.

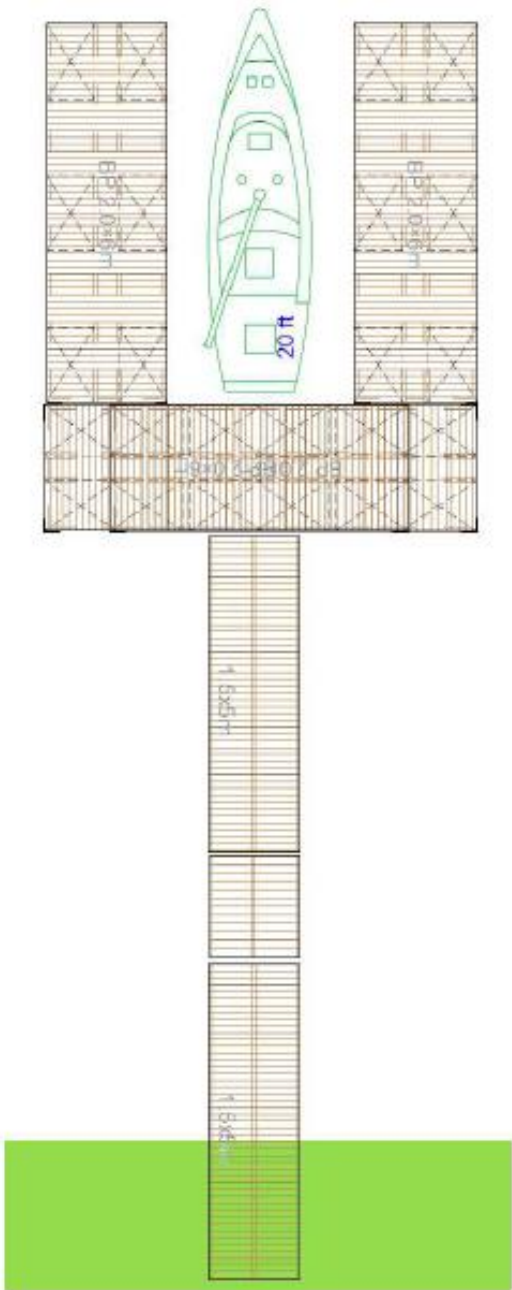

Main problem

Very few existing swimming areas are available to all, which restricts access to certain target groups, especially wheelchair users, to explore nature and travel on waterways. Local and regional districts are also very interested in tackling this challenge by the large number of applications received for participation in the cross-border projects

The main objective of the project is to improve the existing infrastructure for people with mobility impairments, as well as senior citizens and families with small childrens

Plan is to build a boardwalk in Lielezers for people with mobility impairments, to create a place where it's easier to board in boat, or getting into a kayak, and a ramp for safe entry into the water for people with mobility impairments.

Limbažu novads

This is actually a children's swimming area, but it is also currently accessible to people with mobility impairments.

Cross-border relevance of the investment

- 1) To develop and create a solution for a full-fledged boat boarding place for people with mobility impairments;
- 2) To improve water tourism and fishing opportunities, to develop accessible water features and waterway networks and publish them on www.riverways.eu and www.mapeirons.eu

Who owns the site where will take care of the maintenance of the investment?

The project site is managed by the local government agency "LAUTA" established by the Limbaži region, which monitors and maintains territory every day.

Our plan is to make this kind a project around Limbažu region - in Augstroze, Bīriņi and Dūņezers as well.

Thank you for your attention!
